Row width: (based on spacing of the planter row units, this should be the same as listed on entry.)
Row spacing between planter row units = ______________ inches ÷ 12 = ______________ feet of row width

*Row length in feet: Record each pass through the field separately. Record all calculations to four decimal places.
*Ref: Harvest Rules, pg. 11, Measuring

1.2500 harvested in one continuous pass: __________________________ X __________________________ ft = __________________________ ft

# of rows harvested with header pass  Row length  Total row length one

Multiple passes to harvest 1.2500 minimum: A set of rows shall be harvested, then three times that number skipped, another set harvested and three times that number skipped and so on until 1.2500 or more acres has been harvested.

________________________ X __________________________ ft = __________________________ ft

# of rows harvested with header pass  Row length  Total row length one

________________________ X __________________________ ft = __________________________ ft

# of rows harvested with header pass  Row length  Total row length one

________________________ X __________________________ ft = __________________________ ft

# of rows harvested with one header pass  Row length  Total row length

________________________ X __________________________ ft = __________________________ ft

# of rows harvested with header pass  Row length  Total row length one

________________________ X __________________________ ft = __________________________ ft

# of rows harvested with header pass  Row length  Total row length one

Total length of all rows = __________________________ ft
(also use in line 28 below)

** Total length of all rows harvested __________________________ ft X row width __________________________ ft ÷ 43,560

(square feet in one acre) = __________________________ acres harvested. (Minimum of 1.25 acres)
